

Run your entire school without calling IT.

A modern, offline-first school management platform — admissions to payroll, in your browser, on your school's brand.

10-minute setup. No servers, no consultants, no waiting.

Works offline. Internet down? Your school keeps running.

Your data, your device. Per-school tenancy, no shared database.

Whole community. Admin, teacher, student, parent — one platform.

Why skoolDesk

The problem. Most school ERPs take months to deploy, lock data inside a vendor's database, fall over when the internet does, and force every persona — admin, teacher, parent — through the same clumsy interface.

Our answer. A self-contained, offline-first platform that brands itself to your school in minutes, gives every role its own tailored experience, and keeps your data on your devices — under your control.

20 capabilities, mapped to outcomes

1 Zero-Setup Onboarding

Live in 10 minutes, not 10 weeks.

- **Two-step setup wizard** — school details + admin account, and you're operational.
- **Self-branding at runtime** — name, tagline, contact info, social links, brand colour, logo, favicon — all configured by the school.
- **Live theming** — document title, browser tab icon, and theme colour update instantly across the app.
- **Editable any time** — admin revisits School Profile to update branding without raising a ticket.

Pitch: "Your school's logo and colours, on your school's URL, by tomorrow morning."

2 Multi-Tenant by Design

Your data is yours, period.

- **Per-deployment tenancy** — each install is its own world; no shared database with other schools.
- **Local-first storage** — student records, fees, salaries live on the school's own device.
- **No vendor lock-in** — data is always accessible to the school, never held hostage.

Pitch: "Other vendors put 500 schools in one database. We give you your own."

3 Role-Based Access for the Whole Community

One platform, four audiences, four tailored experiences.

- **Admin** — full control of academics, people, fees, payroll, exams, reports.
- **Teacher** — only their classes, timetable, attendance, marks, payslips.
- **Student** — own timetable, attendance, results, report cards, fee status.
- **Parent / Guardian** — ward's attendance, marks, dues, parent announcements.
- **bcrypt password hashing** — same algorithm banks use; no plain text passwords.
- **Route-level role guards** — wrong-role pages are blocked at the navigation layer.

Pitch: "The right person sees the right thing — and never anything more."

4 Academic Setup Done Right

Model your school exactly as it operates.

- **Academic years** — one active year drives defaults across the system.
- **Classes & sections** — multiple sections per class (V-A, V-B...), each with its class teacher.
- **Subjects** — code-based master (MATH-9, SCI-10) reused across classes.
- **Class teacher assignment** — auto-surfaced in attendance and reports.

Pitch: "Set it up once at the start of the year — the rest of the system inherits it."

5 People Management — One Source of Truth

Stop juggling Excel sheets for students, staff, and parents.

- **Students** — admission number (unique), name, current section, linked guardian.
- **Guardians** — separate entity; one parent of three students = one record.
- **Teachers & staff** — employee number, official email, full profile.
- **User accounts** — every login is linked to a real person record. No duplicates.
- **Database-enforced uniqueness** on admission numbers, employee numbers, emails.

Pitch: "One student, one record, one truth — across attendance, fees, exams, and report cards."

6 Enrollment Per Academic Year

Promote, repeat, transfer — without losing history.

- **Year-aware enrollments** — last year's section and roll number are preserved when a student moves up.
- **Roll number management** — assigned per section per year.
- **Promotion-friendly** — new year, new sections, full history retained.

Pitch: "Three years from now, you'll still know exactly where a student sat, with which roll number, under which class teacher."

7 Timetable — A Real Weekly Grid

Replace the laminated chart on the staff-room wall.

- **Period definitions** — define your bell schedule once.
- **Section view** — every section's weekly grid: subject + teacher per period.
- **Teacher view** — every teacher's personal weekly schedule across all classes.
- **Conflict-aware** — compound database indexes prevent double-booking the same teacher.

Pitch: "Teachers stop asking 'where am I supposed to be?' and start teaching."

8 Daily Attendance — Fast, Auditable, Reportable

The single most-used feature in any school. 60 seconds per class.

- **Section-by-day marking** — pick section, pick date, mark statuses.
- **Per-student summaries** — trend across the term in one click.
- **Per-section summaries** — today's attendance % at a glance.
- **Indexed for speed** — instant reports even on years of data.
- **Audited** — every entry and edit logged with actor and timestamp.

Pitch: "From 'who's absent today?' to 'who's been absent more than five times this month?' — both answered in two clicks."

9 Exams & Report Cards

From mark entry to a printable report card without copy-paste.

- **Exam definitions** — Term 1, Half-Yearly, Final — tied to class and academic year.
- **Mark entry** — per student, per subject, per exam — uniqueness enforced by the database.
- **Report cards** — generated per student, per exam.
- **Historical** — last year's data fully preserved and queryable.

Pitch: "Teachers enter marks once. The report card writes itself."

10 Fees — Structures, Invoices, Payments, Receipts

The feature that pays for the software.

- **Fee structures** — per class, per academic year (tuition + transport + lab + ...).
- **Invoices** — per student, with status (pending / paid / overdue) and due dates.
- **Payments** — recorded against invoices with **database-unique receipt numbers**.
- **Student/parent fee view** — log in to see exactly what's owed and what's been paid.
- **Audited end-to-end** — every invoice, payment, and status change logged.

Pitch: "Parents stop calling the office about fees. They log in and see for themselves."

11 Payroll — Staff Salaries, Fully Managed

Most school software ignores payroll. We don't.

- **Salary structures** — per-teacher earnings/deductions with effective-from dates for mid-year revisions.
- **Monthly payslip generation** — bulk for any chosen month.
- **Salary payments** — **database-unique voucher numbers**.
- **Staff payslip view** — teachers download their own payslips. No HR follow-up.
- **Status workflow** — draft → approved → paid.

Pitch: "Your office stops printing 60 payslips on the 1st of every month."

12 Announcements — Targeted, Not Spammy

WhatsApp groups are chaos. This is structured.

- **Audience targeting** — All / Teachers / Students / Parents / a specific class.
- **Authored & timestamped** — accountability built in.
- **Persistent** — announcements don't scroll into the void.

Pitch: "Stop spamming 800 parents about a Class 4 picnic."

13 Audit Log — Compliance & Trust

Schools handle children's data. Trust requires receipts.

- **Every write logged** — additions, edits, deletions across every module.
- **Captures actor + timestamp + entity + action** — full forensic trail.
- **Secret fields redacted** — passwords never appear in logs.
- **Admin-viewable** — answer "who changed this mark?" in seconds.
- **Indexed** by entity, by actor, by date — fast lookup at scale.

Pitch: "When a parent disputes a mark or a fee entry, you have the receipt — every time."

14 Command Palette & Keyboard Navigation

Power-user speed for the staff who live inside the system all day.

- **Cmd / Ctrl + K command palette** — jump to any page, action, or record without the mouse.
- **Keyboard-first workflow** — designed for the front-desk operator who clicks 200 times a day.

Pitch: "Your front-desk operator will thank you in week two."

15 Light & Dark Themes

Small touch, big perception.

- **One-click switch** — works on every page.
- **Brand colour preserved** — your accent stays consistent in both modes.

Pitch: "The system that looks as modern at 9 PM as it does at 9 AM."

16 Form-Level Validation Everywhere

Bad data is the #1 reason ERPs fail in schools. We block it at entry.

- **Schema-backed validation** — every form validates input before it touches the database.
- **Inline error messages** — staff see exactly what's wrong, where.
- **Shared form components** — consistent look and behaviour, minimal training time.

Pitch: "Garbage in, garbage out — except we don't let the garbage in."

17 Offline-First Architecture

Schools in semi-urban areas lose internet for hours. Your work shouldn't stop.

- **Works offline by default** — attendance, mark entry, fee receipts continue with zero connectivity.
- **Instant performance** — no network round-trip on any action; the UI is always immediate.
- **No "server is slow today"** — there isn't a remote server in the critical path.

Pitch: "When the school's internet goes down, your office keeps running. Try that with any cloud-only ERP."

18 Data Privacy & Sovereignty

A growing concern with parents and education boards.

- **Data lives on the school's own device** — no cross-border transfer, no third party storing minors' PII.
- **Aligned with India's DPDP Act sensibilities** — minor's data stays under the school's direct control.
- **No tracking, no analytics phoning home** — what happens in your school stays in your school.

Pitch: "You decide where your students' data lives. Not us. Not anyone else."

19 Built on Modern, Maintainable Tech

For the IT-savvy decision-maker who asks "what's under the hood?"

- **Vue 3 + Vite** — same stack used by GitLab, Nintendo, and Adobe.
- **Tailwind CSS + PrimeFlex** — clean, responsive, mobile-friendly.
- **Pinia + Dexie/IndexedDB** — battle-tested libraries.
- **Tested with Vitest** — automated tests across stores, repositories, schemas, and the audit pipeline.

Pitch: "Built on the same toolkit as Fortune 500 web products — at a school's price."

20 Public Marketing Site Bundled In

The school doesn't need to also pay a web designer.

- **Built-in public site** — Home / About / Contact pages that double as the school's web presence.
- **Auto-branded** — uses the same school profile; the public site looks like the school's, not the vendor's.

Pitch: "Your school management system is also your school's website. Two products, one bill."

How to sequence this in a 30-minute pitch

1. **Open with pain (2 min)** — "How long does it take your office to close month-end fees today?"
2. **Demo the wow moment first (5 min)** — live setup wizard → school name + logo → instantly branded app.
3. **Walk one workflow end-to-end (10 min)** — admit a student → enroll in a section → mark attendance → enter marks → generate report card → raise invoice → record payment → see audit log entry. *One student, every module touched.*
4. **Show the parent / teacher view (3 min)** — log in as a parent, see fee dues and report card. The "aha" moment for the principal.
5. **Address objections (5 min)** — data safety, internet outages, training time.
6. **Pricing + next steps (5 min)** — pilot offer, onboarding timeline.

Three killer one-liners for cold outreach

"Run your entire school — admissions to payroll — without ever calling IT support."

"The only school ERP that works when your internet doesn't."

"Your school's data, on your school's devices, under your school's control."
